Supporting disaster preparedness and response by landowners

Draft issue
There is a range of disasters that have or could occur in the Adelaide and Mount Lofty Ranges region. This includes floods and bushfires, both of which have occurred in recent years.

Different disasters have different effects on industry and communities. Disaster type, location and intensity can determine what the effects of any given disaster might be.

In addition these disasters have impacts on the natural resources of the region. There is a need to assist landholders to develop resilient businesses that can recover from natural disasters, and to ensure that the region is prepared to assist landholders with recovery efforts.

Subregions affected by the issue
- Central Hills
- Fleurieu Peninsula
- Northern Coast and Plains
- Northern Hills
- Willunga Basin

Conceptual models related to the issue
- Sustainable primary production
- Building capacity of natural resources managers

What are these draft issues?
The information in this document relates to a list of draft issues that are impacting on the natural resources of the region.

The issues list has been developed based on information collected during a regional planning process, and a range of projects that the Adelaide and Mount Lofty Ranges Natural Resources Management Board has undertaken.

New issues are added to the list as they become apparent, and as issues are addressed by projects they drop off the list. As the issues are constantly evolving, the information in this document may no longer be relevant. Check the current list for the most up-to-date issues:
